SFA 300 PRO FEATURES

ENGINE

The brand new QJMOTOR SFA300 is powered by a single-cylinder, liquid-cooled engine that produces 24 horsepower. This allows it to operate efficiently on both paved and unpaved roads.

SUSPENSION

The brand new QJMOTOR SFA300 features independent double wishbone suspension at the front, while the rear features a single trailing arm integrated with the drive shaft and differential. This distinguishes this model from competing 300cc ATVs, which are typically chain-driven. The suspension on this ATV is based on two oil-damped shock absorbers at the front and a single central shock absorber at the rear.

COMFORT

The brand new QJMOTOR SFA300 is a two-seater extended quad with a comfortable backrest and passenger handles. Thanks to the flat seat, the rider can easily balance their body on uphill and downhill terrain when riding alone.

TFT DISPLAY

This brand new QJMOTOR SFA300 has an aesthetic TFT display on which you can read the speed, engine speed, fuel level, engine temperature, current gear engaged and the number of miles travelled. The driver also has two USB charging sockets at their disposal.
